I would like to create a replit app that has the following features:

1. Users will be able to create an account with their email and a password.
2. Users will be able to login to the application. A forgot password feature will be included.
3. Users will then create a health profile that will be saved in a database. The health profile will include their Birthdate, Sex (male or female), Height (in feet and inches), weight (pounds). The health profile will also include the option of entering multiple medical conditions and their current medications. This health profile will have a "Save Profile" submit button. It will be saved to their record in the health profile table. Each time the user logs in to the application their health profile will be displayed so that they can make any changes and save them.
4. After saving or confirming the health profile date, they will be redirected to a page in which they will be asked to upload Laboratory PDF Results. Once uploaded the results and health profile will be send to Chat GPT API using the prompt: "Please use the users health profile information and laboratory results to get the user an analysis of the results. Provide the user with the following:
    1. Date of analysis
    2. Their BMI score, placed on a line graph of BMI ranges of underweight, normal, overweight, and obese.
    3. The next section of the analysis with have a simple explanation of the purpose of each test and what their result could indicate given their health profile data.
    4. The next section will be a list of questions that should be asked of their medical professionals, given the laboratory results and the users health profile.
    5. The final section will be a medical disclaimer that the report is to be used in conjunction with the users medical team. This should include the typical language that is used in typical medical disclaimers.
5. There will be an HTML page with the heading "Deep Dive". I will add the content to this page later, but the health profile, and the "Upload Lab Report" pages will have a link to the "Deep Dive" page.
6. The name of this app will be "Health Matters at Large". Each page will have that that name centered in the header.
7. My Chat GPT API Key is: sk-proj-bUZa7UtQAWidWjlpmaoOTPfAPMamaEfphhF8QS5rMNTGnElEP9hZuBxC4mqeGhQlKf8v6Qm PxAT3BlbkFJnXlra6aTfjBsFJqlfq3qMsSg6uLvsP24Th_kFnLflZ-G8OQjRe1G3mVAunUF6TlVKs_4hGf18A

If you need any clarification, please ask me.
